

Soda Can Tab Bracelet

Materials:

A shoelace

Several soda can tabs, depending on your wrist size.

Be careful! The backs of these may be sharp.

If they are, recycle them in the proper receptacle and just save up more.

1: Crease the lace in half and even it out, make sure it's not twisted or it might become uncomfortable when you wear it.

2. Pull a soda can tab over the laces, one half in each hole, face up like on a soda can:
It should end up looking like this:

3. Pull a second tab over in the same direction as the other one so it looks like this:

Next, pull the second tab to the left so it overlaps, as shown below. Make the second one cover half of the first tab.

4. Place a third soda tab next to your second one so it covers the other half of the first tab.

Imagine it without the shoelace, it will be like putting them together like this:

5. Take the top part of the shoe lace and put it through the top hole in your third tab and to your first tab so it looks like this:

And do the same to the bottom hole:

6. Now take another soda can tab and place it under your third tab:

And thread the shoes laces up and through:

7. Now take yet another soda can tab and put it on top of the last one:

And thread the lace through again:

8. Repeat until it fits your wrist and can slide over your hand when you need to take it off. When you have it the length you need, make sure the last tab is an “under” tab. This will help the bracelet connect. So either add one or take away one if you need to and follow the rest of this guide:

9. Put the tabs together, and pull the shoelaces through like you are adding another tab.

10. Pull tight and they should connect and it will look like this:

11: Pull each lace to one side and wrap it under the bracelet once. Then you can tie it off and cut the lace if you choose.

Now your bracelet is complete! Enjoy and don't forget to spread the word of our website!
